Kadaknath Chicken.
No Anti-Biotics. No Vaccines.

KADAKNATH CHICKEN EQUIVALENT TO THAT OF GREEN PIGEON

Black Meat Chicken:

Three different breeds of Black Meat Chicken(BMC) is spread across the globe. They are:

1. Kadaknath - Native: Madhya Pradesh, India
2. Silkie - Native: China
3. Ayyam Cemani -Native: Indonesia

What is Kadaknath?

Kadaknath is the only Black Meat chicken (B.M.C.) breed of India. It is a native bird of Madhya Pradesh, reared mainly by the tribal communities of Bhil and Bhilala. The commonly available colours of Kadaknath are jet-black, penciled and golden.

The bird is very popular among the adiwasis mainly due to its adaptability to the local environment, disease resistance, tasty meat quality, texture and flavour. Though the flesh of this breed is black, it is considered not only a delicacy of distinctive taste, but also of medicinal value.

Nutritive Value:

Protein content in Kadaknath is higher than 25 % in an ordinary bird it varies between 18-20%.

Research has shown that this species has **lower cholesterol (0.73-1.05%)** than white chicken (13-25%)

High levels of **18 amino acids** out of which 8 are essential for the human and **rich in hormones**.

Vitamins B1, B2, B6, B12, C and E, niacin, protein, fat, calcium, phosphorus, iron, nicotinic acid, etc.

Recipes:

Kadaknath Chicken tastes good with all types of Country Chicken recipes viz., Nattu Kozhi kuzhambu, Nattu kozhi fry, Nattu Kozhi Biriyani, Soup etc.

1^{Meat} Kg ₹ 370/-

Medicinal Properties:

Kadaknath has special medicinal value in homeopathy and a particular **nervous disorder**.

The **Central Food and Research Institute, Mysore**, studied its medicinal qualities and found it suitable for **cardiac patients** as it increases blood supply to the heart.

The tribal uses Kadaknath blood in the treatment of **chronic disease** in human beings and its meat as aphrodisiac (Believed to infuse Vigor in male).

Experts say that Viagra or Sildenafil Citrate is basically a **vasodilator** designed for increasing blood flow to the heart and the melanin pigment in Kadaknath does the same.

Kadaknath chicken has a peculiar effectiveness in treating women's **menstrual** disorders, sterility, Menopausal (abnormal menstruation), **habitual abortion**.

Eggs:

The eggs are also an ideal nutritive, especially for old people and high blood pressure victims, since the cholesterol content is lower.

Rich in amino acids and higher than that of other kinds of birds.

The eggs of Kadaknath chickens can be used effectively to treat severe headaches, headaches after giving birth, faintness, asthma and nephritis (acute or chronic inflammation of the kidney).
